Hiring Manager

Irving Consumer Products Inc.

Dear Hiring Manager,

I am writing to express my interest in a technology or data-focused internship at Irving Consumer Products. I am particularly excited by the opportunity to apply data analysis, automation, and software development to improve operational efficiency, optimize processes, and support data-driven decision-making within a large-scale manufacturing environment.

What draws me to Irving Consumer Products is the direct, tangible impact of its operations—where improvements in systems, processes, and data usage can immediately influence production efficiency, supply chain performance, and product quality. I am especially interested in how data can be leveraged to identify bottlenecks, optimize workflows, and support smarter operational decisions.

My experience centers around building end-to-end data-driven systems. In *Opportunate*, I worked with 7+ Statistics Canada datasets across 72 economic regions to build a Canadian Opportunity Index. I engineered 12+ features—including job growth, migration trends, and affordability—and applied normalization techniques to create a standardized scoring system. I deployed the project as an interactive web application with visualizations and an AI-powered assistant for natural language queries. This experience strengthened my ability to work with large, multi-source datasets and translate complex data into clear, actionable insights.

In *FanFinder*, I developed a machine learning-based recommendation system using K-means clustering to group players into performance archetypes and return personalized suggestions. While the application was in sports analytics, the core skills—data processing, segmentation, and system design—are directly transferable to identifying patterns and optimizing decision-making in operational environments.

Across both projects, I focused on building systems that go beyond analysis and instead support real-world decision-making. I am particularly interested in applying these skills in manufacturing and supply chain contexts, where data can be used to improve efficiency, reduce waste, and enhance overall performance.

In addition, as the founder of my school's Web Development Club, I developed strong leadership and collaboration skills by guiding peers through technical projects and fostering a problem-solving mindset. I bring a strong sense of ownership, attention to detail, and a continuous drive to learn.

I am excited by the opportunity to contribute to Irving Consumer Products and apply my technical skills to support efficient, data-driven operations in a fast-paced environment.

Thank you for your time and consideration.

Sincerely,

Shaurya Likhi
