Hiring Manager

Florida Crystals / ASR Group

Dear Hiring Manager,

I am writing to express my interest in a data or technology-focused internship at Florida Crystals / ASR Group. I am particularly excited by the opportunity to apply data analysis, machine learning, and software development to optimize large-scale agricultural and manufacturing operations.

What draws me to your organization is the direct connection between data and real-world impact. From agricultural production to refining and supply chain operations, even small improvements in efficiency, forecasting, or process optimization can have significant effects at scale. I am especially interested in how data-driven systems can be used to improve operational performance, reduce waste, and support smarter decision-making across complex production environments.

My experience centers around building end-to-end data-driven systems. In *Opportunate*, I worked with 7+ Statistics Canada datasets across 72 economic regions to develop a Canadian Opportunity Index. I engineered 12+ features—including job growth, migration trends, and affordability—and applied normalization techniques to create a standardized scoring system. I deployed the project as an interactive web application with visualizations and an AI-powered assistant for natural language queries. This experience strengthened my ability to work with large, multi-source datasets and translate complex data into actionable insights.

In another project, *FanFinder*, I developed a machine learning-based recommendation system using K-means clustering to group data into meaningful patterns and generate personalized outputs. While the application focused on sports data, the underlying approach—data cleaning, feature engineering, segmentation, and system design—is directly transferable to identifying trends and optimizing processes in industrial and supply chain environments.

Across both projects, I focused on building systems that go beyond analysis and instead support decision-making. I am particularly interested in applying these skills in operational contexts such as production planning, demand forecasting, and process optimization.

In addition, as the founder of my school's Web Development Club, I developed strong collaboration and leadership skills by guiding peers through technical projects and fostering a problem-solving mindset. I bring a strong sense of ownership, attention to detail, and a continuous drive to learn.

I am excited by the opportunity to contribute to Florida Crystals / ASR Group and apply my technical skills to support efficient, data-driven operations at scale.

Thank you for your time and consideration.

Sincerely,

Shaurya Likhi
