Hiring Manager

Hydro One

Dear Hiring Manager,

I am writing to express my interest in a technology-focused internship at Hydro One. I am particularly excited by the opportunity to apply data science, machine learning, and software development to critical infrastructure systems that power communities across Ontario.

What draws me to Hydro One is the essential role it plays in delivering reliable electricity and modernizing grid infrastructure. I am especially interested in how data and intelligent systems can be used to improve grid reliability, optimize operations, and support decision-making in large-scale, real-world environments where performance and resilience are critical.

My experience centers around building end-to-end data-driven systems. In *FanFinder*, I developed a machine learning-powered recommendation system using UEFA Champions League player data. I performed data cleaning and feature engineering on hundreds of records and applied K-means clustering to group players into performance-based archetypes. I then built a recommendation engine that returns the top five most relevant outputs based on user input. This project strengthened my understanding of data pipelines, unsupervised learning, and system design.

In *Opportunate*, I worked with 7+ Statistics Canada datasets across 72 economic regions to build a Canadian Opportunity Index. I engineered 12+ features—including job growth, migration trends, and affordability—and applied normalization techniques to create a standardized scoring system. I deployed the project as an interactive web application with visualizations and integrated an AI-powered assistant for natural language queries. This experience strengthened my ability to work with large, multi-source datasets and design systems that make complex data accessible and actionable.

Across both projects, I focused on building systems that go beyond analysis and instead support real-world decision-making. I am particularly interested in applying these skills in infrastructure environments like Hydro One, where data can directly influence operational efficiency, reliability, and long-term planning.

In addition, as the founder of my school's Web Development Club, I developed strong collaboration and leadership skills by guiding peers through technical projects and fostering a supportive learning environment. I bring a strong sense of ownership, curiosity, and a continuous drive to learn and improve.

I am excited by the opportunity to contribute to Hydro One's mission of delivering safe and reliable energy while continuing to grow as a data-driven problem solver.

Thank you for your time and consideration.

Sincerely,

Shaurya Likhi
